

@comp2537-students **Assignment 2**

Due next Friday May the 13th at midnight.

Objective 1 - To replace Pokiapi.co with your own API. client code should not be changed. You may sample the pokémons' data. For example, in your db, manually store couple of pokémons, types, or what ever other data you accessed in A1.

Objective 2 - To add a timeline component. More on the Timeline Component: The timeline component must log the collection of *events* in a timely manner. Events could be posts, logs, images created or added based on date and time. When the user adds a new item on the timeline, their timeline should automatically be refreshed. Your timeline should support the four CRUD operation.

So based on today's labs. I am gonna ask you to submit 1 - [GITHUB link] contains two folders for each server; the **API** and the **SSR** server.

2- If you managed to deploy it Heroku, then may be also submit two Heroku links. OR 1 min YT video demonstrating local testing.

3- One min YT video demonstrating the time component.
